SUMMARY

- Backend engineer specializing in scalable systems and AI integration. Experienced in building full-stack applications across multiple stacks (MERN, Spring Boot, TypeScript) with focus on real-time architecture, database optimization, and production-grade systems. Proficient in designing modular backends, implementing AI-powered features using OpenAI/Gemini APIs, and deploying applications to production. Passionate about system design, performance optimization, and shipping reliable software.

EDUCATION

- **Cambridge Institute of Technology** Bengaluru, Karnataka, India
• B.E. in Computer Science and Engineering — GPA: 9.04 2023 – 2027

TECHNICAL SKILLS

- **Core CS Concepts:** Data Structures and Algorithms, System Design basics, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks
- **Languages:** JavaScript, TypeScript, Java, Python, SQL
- **Frontend Development:** React.js, Next.js, Tailwind CSS, Progressive Web Apps (PWA), Service Workers
- **Backend Development:** Node.js, Express.js, Spring Boot, RESTful APIs, WebSocket (Socket.io), JWT Authentication, MongoDB Transactions
- **AI/LLM Tools :** OpenAI API, Google Gemini, Prompt Engineering, LLM App Development, Machine Learning Fundamentals
- **Databases:** MongoDB, MySQL, SQLite
- **Developer Tools:** Git, GitHub, Postman, Docker (basic), Vite, Linux, Vercel, Render

TECHNICAL PROJECTS

- **ProjectForge – Real-Time Collaboration Platform** — **MERN Stack, Socket.io, MongoDB** : Built a full-stack platform for student project collaboration featuring real-time WebSocket chat, skill-based team matching using Jaccard similarity algorithm, and transaction-safe team formation. Implemented JWT authentication, task management, application workflow, and analytics dashboard.
- **Capsule – Productivity Tracking PWA** — **React, Spring Boot, MongoDB, OpenAI API** : Developed an offline-first Progressive Web App consolidating job tracking, task management, and habit monitoring. Integrated AI-powered resume analysis using OpenAI/Gemini APIs, implemented service workers for offline functionality, and push notifications with VAPID.
- **Automated Event Management System** — **React, Node.js, MongoDB**: Built a full-stack platform with QR-based event check-in, role-based access control (Admin/Organizer/User), and real-time event registration tracking to streamline event entry and reduce manual verification.

POSITIONS OF RESPONSIBILITY

- **Programmer – Ad Astra Club** CiTech, Bengaluru, India
2024 – 2025
Developed frontend features and contributed to event management and registration web applications used for club events.

CERTIFICATIONS

- **The Complete JavaScript Course:** Udemy
- **Responsive Web Design:** freeCodeCamp
- **Joy of Computing Using Python:** NPTEL
- **Programming, Data Structures and Algorithms using Python:** NPTEL
